

AFTEK Inc
Demand Pulse MIG Welding
the BEST welders you never heard of...'

The **MV300 Series** is available in the "Standard" Model, with two **Demand Pulse MIG** Modules for use with .035 and smaller wires, and the **DPM-III** with three modules where .045 and some larger wires will be used.

The **DPM-III** is recommended for pipe welding, and other pressure welds to **ASME, API, or AWS** codes; The **Standard Model** is used primarily for welding sheetmetal. Excellent on **GALVANIZED**.

Both feature non-short circuiting Constant Current GMAW with NO SPATTER, and NO arc-outages. Easiest out of position welding EVER!

Replace TIG!

MV300DPM-III Multi-Process Welding Machine

AFTEK MV445DPM-III is ideal for shops that need a little more muscle. **AFTEK** offers standard capacities to 1250 amps, and "specials" to 2000 amps if you need a LOT more muscle! Our most popular model for pipe and vessel work.

If you do **HEAVY ARC GOUGING**, **AFTEK** offers **HEAVY DUTY** machines, with simple, non-electronic controls for severe service. Our MV-650 and MV-1000 are ideal for pipe shops that need ONE machine for GTAW, GMAW and SAW – do the root with non-shorting MIG or TIG, then sub-arc out with ONE machine.

Fine control down to 5 amps TIG, 35 amps MIG, 5P root passes–

AFTEK MV Series - The ONLY machines that CAN do all this!

MV445DPM-III Multi Process Welding Machine

The **Power 22-MV300** is a **Multi-OPERATOR Multi-Process Power Supply**, for use where power and space are at a premium. **Demand Pulse MIG** is standard.

Two operators can run **GMAW, GTAW, and/or SMAW** at the same time, without interference. **Also available in 4 and 8 operator models.**

Parallel BOTH sides for 600 amps of power for gouging or sub-arc!

Shown is the **STAINLESS Model**, an extra cost option, but worthwhile for chemical plants, paper mills, etc. **ALL AFTEK** machines are available in all stainless.
