

AFTEK Test Bank I 400 amperes
AFTEK Test Bank II 600 amperes

- Digital Meters
- Fan Cooled
- 50 amp step selector switches
- Storage Space in Base
- 2 fixed, 2 swivel casters

Heavy Duty Construction

115 VAC

Uses same edge-wound, heavy duty resistors as AFTEK Resistor Welding Controls and Machines.

Three year warranty.

AFTEK manufactures a broad line of resistor controlled welding machines, from a 300 ampere Stick/TIG model to our 2000 ampere Power 88 Eight Bank Welder.

The AFTEK Demand Pulse MIG System is without equal for welding sheetmetal of all types, and for pressure pipe and vessel welding. NON short-circuiting metal transfer assures high quality welds, with NO spatter on most metals.

AFTEK manufactures a full line of "GRIDS", or Resistor Controls, for Multiple Operator Systems. AFTEK also manufactures 60 and 80 volt Multiple Operator Power Supplies. Both the GRIDS and the Power Supplies can be used with ALL brands of MO equipment.

The AFTEK Test Bank I and II use all standard parts interchangeable with our welding machines.

An economical alternative to the major brand offerings.

Both are small enough to easily transport to the job, require only 115 VAC to operate.
